

# Azure Well Architected Review Service

Helping customers optimise their Azure environments

Given the widespread use of cloud technologies, enterprises deploying workloads on Azure are faced with the question “Are You Well-Architected?”

A well-architected system is one that should be capable of helping the business achieve set objectives, evolve with new technology and adapt to changes. Whether you are thinking about migrating to the cloud or already running workloads in the cloud, Insight offers an Azure Well Architected Review Service to help you optimise your Azure environment.

## Business challenge

Keeping up with the pace of innovation in Azure cloud can be challenging. New services are announced on a regular basis coupled with enhancements to existing services. To ensure optimal utilisation of the platform, businesses will need to continually evolve their architecture to use new services and features from Azure. Furthermore, building highly secure environment and ensuring your application is running with the right mix of compute, storage, networking, databases and managed services at the best possible cost point requires professional Azure expertise. Lastly, one of the areas that is often neglected is failure management. Every system fails and it is paramount that businesses put in place measures to respond to failure at any scale and ensure business continuity.

## Benefits

- Address challenges and optimisation exercises to ensure Azure services are continually improved.
- Maintain cost-effectiveness and security of deployed Azure services.
- Manage Azure services according to best practices.
- Receive an Azure Well-Architected Review Report with best practice recommendations for optimizing the Azure environment.
- Obtain an estimate of the engineering effort required for completing the recommended remediation activities.
- Review the output report with project stakeholders and discuss the recommended next steps.

## Our Solution

**Insight's Azure Well-Architected Review Service is a strategic and structured technical optimisation service delivered by Insight's experienced, and certified Azure Experts.**

The service is designed to complete a technical discovery and assessment of your existing Azure environment and provide best practice recommendations for optimising the deployed Azure Services. The service has been developed in line with the Microsoft's Well-Architected Framework (WAF).

Insight's Azure Well-Architected Review Service covers assessing your business & technical requirements and producing a best practices strategy for your Azure environment. The service will be delivered as a two-way consultative engagement and engineered to deliver the following business outcomes, and strategic objectives:

- Technical review of business requirements and strategy for your Azure Environment.
- Complete a discovery and optimisation assessment of your Azure subscriptions and resources deployed.
- Review the current identity & access management, security, networking & connectivity, backup & disaster recovery, and monitoring & management setup.
- Provide best practice technical recommendations for optimising the Azure environment and services.
- Review of the technical output report with next steps planning with your project stakeholders.

No matter where you are in your Azure journey, our consulting services will help you envision new opportunities and roadmap your future Azure projects.
